PROFILE

I am a 5th-semester student majoring in Informatics Engineer at Universitas Sangga Buana YPKP Bandung. Although I am still pursuing evening classes from 6 PM to 10 PM, my study schedule will not interfere with any work commitments if I am hired.

I have a strong passion for front-end development and am proficient in HTML, CSS, JavaScript, and regularly use React.js, Tailwind CSS, and Vite in my personal projects. I have also worked on a team project called the Skripsi Management Information System (SIM-Skripsi) with my classmates as a final project in the 4th semester.

In addition, I have experience using PHP and Laravel. I am eager to gain opportunities to further develop my skills through work, internships, or apprenticeships as a front-end developer, especially with React technology. I have also obtained a React Developer certificate from Dicoding, showcasing my competency in this field.

TEAM PROJECT

SIM – Skripsi

May – 2024

- Final project for the 4th semester Web Programming course.
- Responsible for designing and developing the front-end interface.
- Integrated the front end with the back end using APIs.
- Technologies used: React, Vite, and Tailwind.

PERSONAL PROJECT

Qay Burger

June – 2024

- Developed a landing page for a burger restaurant using React, Vite, and JavaScript.
- Focused on creating a responsive and visually appealing website with a strong emphasis on UX/UI design.
- Used Tailwind CSS for streamlined development and code consistency.
- Performed cross-browser and device testing to ensure smooth functionality across platforms.

Qay Coffee

August – 2024

- Developed the QayCoffee project using React, Tailwind, and Vite.
- Utilized a JSON file to display the product menu and implemented Swiper.js to create a dynamic carousel.
- Integrated API from <https://fake-coffee-api.vercel.app/> to load product data.
- Performed debugging and testing to ensure the website works optimally across different

Paradise View

Sept – 2024

- Sliced and developed a hotel website for "Paradise View" based on a Figma design.
- Utilized React, Vite, and Tailwind CSS to create a responsive and functional web layout.
- Focused on implementing responsive design techniques using Tailwind CSS, with an emphasis on desktop display.
